SUMMARY

Engineering leader with 10+ years building web and mobile products and 7+ years leading teams. Track record of driving measurable growth, including 20% YoY organic traffic and conversion-lift A/B tests, while running lean, AI-leveraged engineering teams. Hands-on full-stack background (Ruby/Rails, JavaScript) paired with the operational discipline to keep lean teams shipping fast.

TECHNICAL SKILLS

Most Proficient Languages: Ruby, JavaScript

Frameworks: Rails, Stimulus, Hotwire, Hotwire Native, React, React Native

Databases: PostgreSQL, Redis, ElasticSearch, Pinecone

Cloud & Infrastructure: AWS, Docker, Linux

EXPERIENCE

Team Lead / Engineering Manager @ BiggerPockets

Aug 2025 – Present

- Led 3-person Engineering team responsible for delivering and enhancing a revenue-generating affiliate system.
- Restructured team operations to ship more with a leaner team, leaning on AI tooling and standardized environments to sustain delivery velocity.
- Executed test plans to intelligently improve user experiences and increase conversion rates.
- Created Engineering plans according to Product Requirements Document specifications (and wrote a few PRDs myself).
- Planned and incorporated AI into the development process, automating bug fixes and feature development using Claude Code and ChatGPT/Codex.
- Transitioned team from local development environments to local and cloud-based DevContainers.

Staff Software Engineer @ BiggerPockets

Jan 2022 – Aug 2025

- Launched a greenfield iOS mobile app powered by Rails-based HTTP APIs + Hotwire Native.
- Drove 20% YoY organic traffic growth by optimizing legacy site performance to meet Core Web Vitals targets, improving SEO rankings and user experience.
- Guided team through service-based API rewrite to consolidate multiple navigation implementations into a single microservice.
- Implemented real-time push notification system on mobile and desktop using WebSockets and Rails channels.
- Created ML-powered recommendation feature that increased user time-on-site and engagement, implemented using a Pinecone vector database.
- Designed A/B test presenting popular utility in strategic locations, driving a 3.5% increase in signup conversions.

Senior Software Engineer @ Theorem

Sept 2019 – Dec 2021

- Developed an iPad-based application for in-store engraving of Apple Pencils, AirPods, and AirTags.
- Maintained and enhanced a corporate internship platform spanning internship management, automated business reporting, infrastructure integration, and QA lab asset tracking.
- Led development for new Apple engagement within the Retail QA organization, recruited and trained additional developers, then successfully transitioned the client relationship.

Lead Software Developer @ Onsite Health Diagnostics*May 2015 – Aug 2019*

- Led the B2E to SaaS transformation, advising the C-suite on the business model transition and executing a comprehensive infrastructure and development strategy to support the new revenue model.
- Established the HIPAA compliance framework, designing and implementing the security protocols and certification processes required for healthcare partnerships and contractual agreements.
- Built and managed a 4-person engineering team, recruiting, leading, and mentoring in-house developers who maintained and enhanced a custom software suite.
- Oversaw contractor relationships, managing external development resources and company-owned hardware maintenance to support business operations.
- Modernized the health screening platform, leading a team that developed an iPad-based solution to replace paper incentive programs while handling UX design, architecture, user research, and process optimization.
- Executed a strategic leadership transition, hiring and training a replacement to enable a return to hands-on development with larger teams and diverse projects.

Lead Software Developer @ Geoforce*Feb 2013 – Apr 2015*

- Led team that laid the foundational work for a major platform rewrite to upgrade the underlying application framework.
- Enhanced the asset tracking platform, maintaining and improving a software suite for cellular and satellite-based tracker communication across oil and gas operations.
- Built an automated billing system, designing and implementing Rental Radar software that combines asset tracking with rental data to automate customer billing.

Software Developer @ Readyflight*Aug 2012 – Feb 2013***Software QA Analyst / Customer Services Team Manager / Technical Analyst @ Certrec***Jan 2009 – Aug 2012***Technical Analyst @ CAVOK Group / Oliver Wyman***Feb 2005 – Dec 2008***EDUCATION**

B.A., University of North Texas (May 2006)
